ANTHONY BOCCHINO

Senior Front-End Engineer

Prescott, AZ | (949) 395-1004 | anthonybo.dev@gmail.com | anthonybo.com | github.com/anthonybo | LinkedIn

7+ years of front-end engineering, 5+ building streaming media products in React and TypeScript at LiveOne. Primary author of its partner Web SDK and video ad system, and lead on its React migration.

EXPERIENCE

Senior Software Engineer, Front-End Mar 2021 – Present

LiveOne (Slacker Radio), a music and podcast streaming platform with video and live concerts

- Lead the KnockoutJS-to-React migration of LiveOne.com (about **150,000 listeners** and **2.2M listening hours** a year), including a search rewrite, WCAG 2.1 fixes and Playwright and axe-core end-to-end tests.
- Designed and own the LiveOne Web SDK, a JavaScript library for auth, audio and video playback, search and analytics that runs the Samsung, LG and Vizio TV apps and is built for partner reuse.
- Extended VAST and Google Ad Manager video ads on LiveOne.com (about **40,000 ads a month**) and built the SDK's pluggable ad manager, with a dedicated Vizio provider, to bring video ads to TV.
- Delivered video playback, remote handling and Voice Guide support for the LiveOne TV app (React 19, TypeScript, Vite), fixed black screens on TVs running Chrome 47 to 72 and resolved Samsung store rejections on 2024 to 2026 models.
- Tuned the TV app for low-end Vizio TVs (Chrome 72, 1 GB RAM): built a Playwright and Docker harness to measure FPS and memory, and added a device-tiered video quality budget and stall watchdog to the SDK.
- Fixed a production CPU spike the day it was reported by replacing a catastrophic-backtracking regex in a Java request filter with plain string checks, backed by unit tests and a one-line reproduction for QA.
- Review front-end pull requests, including work from an external dev agency, and write design docs from investigation stories that set the approach for new features.
- Created internal tooling with Claude Code and Codex CLI: a macOS app that puts Samsung, LG and Vizio deploy tools from three repositories in one window, a Vizio network inspector and live usage dashboards.
- Developed the Costco member-linking portal as its primary developer (React 19, Redux Toolkit) and a cross-origin embeddable radio widget with a postMessage control API.
- Built Meet & Greet, a WebRTC (PeerJS) platform for 1:1 fan-to-celebrity video calls, and the Social Gloves pay-per-view front end with PubNub chat sharded across rooms.

Software Engineer Jun 2019 – Mar 2021

Parcel Pending, a smart package locker company

- Built package locker kiosk software in Node.js and Angular, with reusable components shared across kiosk models.
- Maintained the Ionic and Cordova resident mobile app used by roughly **100,000** people.
- Created custom kiosk flows for clients with special requirements and managed locker schema changes with Knex.

Earlier: Application Support, Superlative (2017 – 2018); Founder, Lords Network (2013 – 2020)

SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, Sass, Java (JSP), Python, Bash, SQL
Frameworks and build: React, Redux Toolkit, MobX, MUI, Tailwind CSS, Node.js, Vite, Webpack, KnockoutJS
Media and TV: hls.js, Video.js, Chromecast, WebRTC, PubNub, VAST, Google Ad Manager, Samsung Tizen, LG webOS, Vizio
Testing and quality: Playwright, Jest, Vitest, React Testing Library, axe-core, WCAG 2.1 accessibility, Sentry, Docker, Git
AI tools: Claude Code, Codex CLI

OPEN SOURCE

guildhall: terminal and phone dashboard for monitoring many parallel Claude Code sessions (TypeScript, Ink).
pressroom: live timeline of commits, pushes, CI runs and deploys across every repository in a directory tree.

EDUCATION

California State University, Chico | Studied Computer Science
